

Astrophotographer

Mike Taylor

Wednesday, August 29th

6pm-8pm

At the Belgrade Public Library

Observing and photographing the features of the night sky is an awe-inspiring experience that so few people ever get to enjoy. The atmosphere of the night, the sights and sounds, are so very contrary from normal daytime hours that it is literally a different world - a radical world of diffused light, excessive shadows and noises that you will simply never see or hear when the sun is up. These existential awakenings will spark your inner child to marvel at the world again. There is so much to see, so much to hear, so much to enjoy during the dark hours of each day - the Moon, the stars, the Milky Way, the occasional meteor, and the spectacular Northern Lights displays. Accompany Mike on a journey through countless hours of scouting, photographing and processing night sky images.

Light refreshments will be served. For more information, call (207) 495-3508.
